

Project Report :

The logo for 'Cineverse' is displayed in a stylized, blue, hand-drawn font against a black rectangular background.

Project name : 'cineverse'

Developer : Sreekar Basa

INTRODUCTION :-

- This is a project named 'cineverse' – Multi-paged web application developed using Django, Html, CSS, Jsp .
- Django is the only backend used in the project and html, css, jsp were used for frontend development while Html being used most.
- cineverse is a website that provides the information , reviews details about their ongoing/upcoming movies playing in their theatre. So it is an informative website.
- As cineverse is a dynamic website movies can be added (or) removed , details of movies can be edited (or) removed .
- Assuming cineverse as a existing theatre somewhere , this multi-paged web application is developed.
- It contains 5 pages :-
 - ✓ Home
 - Links to movie Trailers .
 - ✓ Movie Information
 - ✓ Cineverse Information
 - ✓ Reviews
 - Individual links to movie reviews and details (Wikipedia , IMDb, Marvel...etc)
 - ✓ About us

Requirements :-

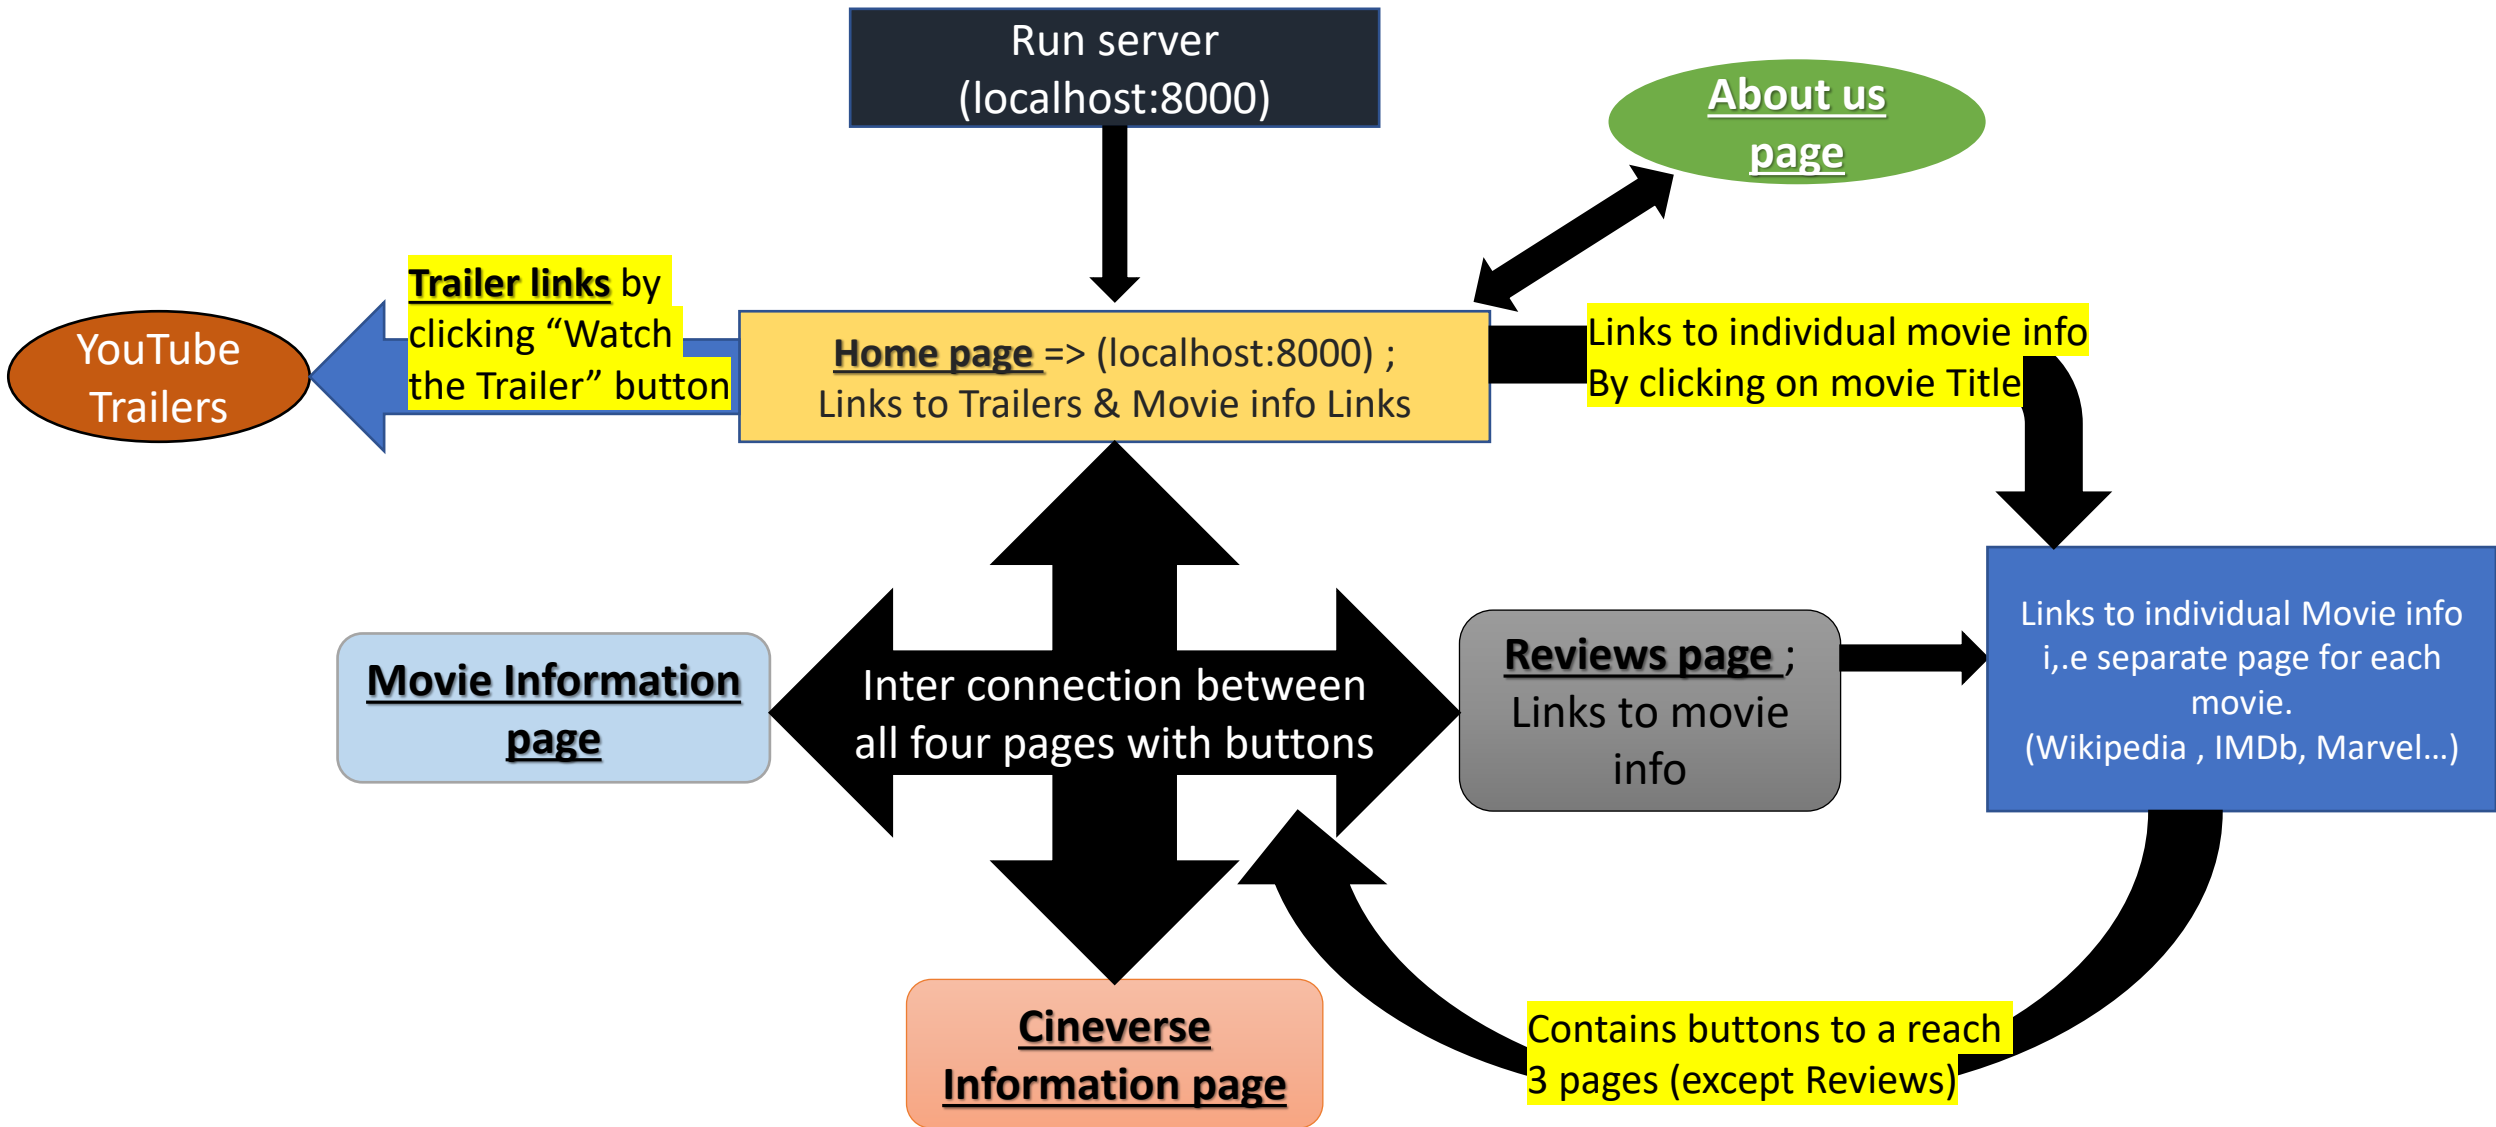

- To create this web application, software requirements are :
 - Python should be installed in the device ; My python version : (3.8.9)
 - Django should be installed in the device ; My Django version : (4.0.6)
 - A Python, Django compiler (or) IDE is required ; My IDE : PyCharm
 - A web browser is required to test / use the web application ; My web browser : Google chrome , Google chrome beta.
- Prior knowledge in python(basics) , oops(object oriented programming) and Django are required .
- Knowledge of Command prompt and few commands are required .
- Knowledge of Html is required.
- Attractive templates are also needed(But not compulsory) to get a good looking website, if design is not important (i.e. only the functioning of website) templates are not required.
- My templates : Travello colorib template (For Home page) ; Nicepage – customized template (For About us page) .

```
Directory of C:\Users\91901\Documents\Django_major

07-08-2022  16:47    <DIR>          cineverse
07-08-2022  09:36             143,360 db.sqlite3
06-08-2022  20:10    <DIR>          Django_major
04-08-2022  18:29    <DIR>          major_signup
20-07-2022  09:39             690 manage.py
05-08-2022  17:12    <DIR>          static
07-08-2022  18:24    <DIR>          templates
                2 File(s)          144,050 bytes
                9 Dir(s)  369,777,954,816 bytes free
```

- We need to create a virtual environment for Django and a startproject 'my_app' (Django_major for me).
- Need to other create a app(s) to get the required output .
- Need a folder to store all the templates.
- Need folders to store all static sources for frontend design.
- Text files can also be created, to note any important points and to write our plans , explanation ..etc.
- Hardware requirement : laptop /pc with windows-7 and above /mac/Linux .

Project overview :-

- Flow chart of Navigation :-

Project overview :-

- Models created inside cineverse app:-

Used in home
and info in
views

```
class Movie(models.Model):
    Name: str          # Name of the movie
    lang: str          # Language of the movie
    screen: str        # screens at which movie is Playing
    Details: str       # show running length
    prices: str        # price - price format (For future requirement)
    shows: str         # At what shows movie is playing
    icon: str          # Poster of the movie
    link: str          # Trailer Links (YouTube)
    availability: str   # comment on sets filling / availability
    available: str     # Based on availability of shows for a movie
    upcoming: bool     # Differentiates between existing and upcoming movies
    upd: bool          # Available (or) Houseful
```

Used in timing
in views

```
class timings(models.Model):
    Name: str          # No use
    cost1: str         # Cost of platinum class seats
    cost2: str         # Cost of golden class seats
    cost3: str         # Cost of silver class seats
    sc1: str           # To display timings , unorthodox way
    sc2: str           # To display timings , unorthodox way
    sc3: str           # To display timings , unorthodox way
```

Used in info in
views

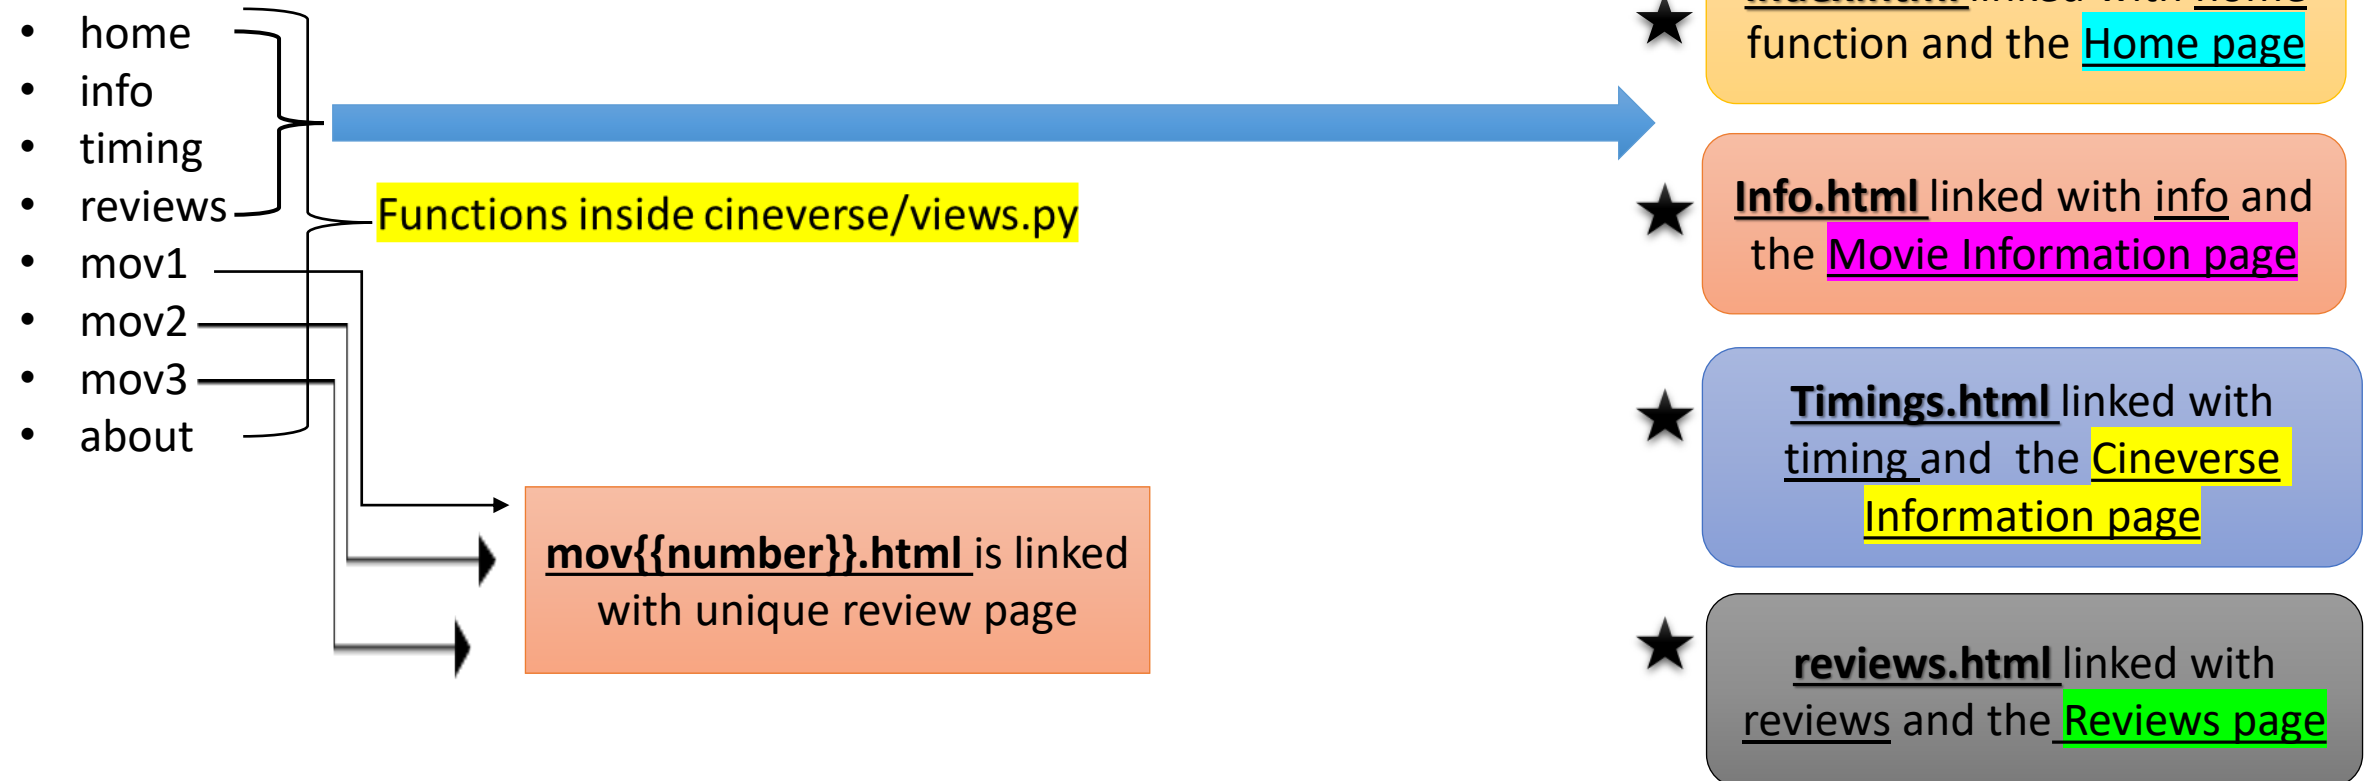

```
class screen(models.Model):
    show_movie: str    # Movie Name
    show_s1: str       # Shows playing of movie in a screen1
    show_s2: str       # Shows playing of movie in a screen2
    show_s3: str       # Shows playing of movie in a screen3
```

Used in reviews
in views

```
class review(models.Model):
    Name: str          # Movie Name
    rating: str        # IMDb rating of the Movie
```

Project overview :-

- As cineverse is developed using Django , it works based on MVT.
- Models are outline / blueprints of the object , the fields are defined here and are assigned with some data.
- Views links the models to Template . Views.py is responsible for the function/logic of a Django app.
- Every function in views is linked with a HTML file and variable in the views.py are passed into the file, i.e. variables can be edited inside views to see the change in frontend view for a user.
- Each time there is a change in views.py it will render the webpage as cineverse used `return render(request, 'file.html')` in all the functions.

Project overview :-

Working of the project :-

- First a plan or a brief overview about the project is required in order to work efficiently.
- After completion of code according to requirement , web application should be tested in web browser.
- First virtual environment should be activated , then run server.

```
C:\Users\91901\Documents\django>c Scripts
'c' is not recognized as an internal or external command,
operable program or batch file.

C:\Users\91901\Documents\django>cd Scripts

C:\Users\91901\Documents\django\Scripts>activate

(Django) C:\Users\91901\Documents\django\Scripts>cd ..

(Django) C:\Users\91901\Documents\django>cd..

(Django) C:\Users\91901\Documents>cd Django_major

(Django) C:\Users\91901\Documents\Django_major>python manage.py runserver
Watching for file changes with StatReloader

System check identified no issues (0 silenced).
August 08, 2022 - 13:20:15
Django version 4.0.6, using settings 'Django_major.settings'
Starting development server at http://127.0.0.1:8000/
Quit the server with CTRL-BREAK.
```

- After moving to cineverse/urls.py there will be URLs for many web pages .

- URLs are set in a such a way that localhost:8000 is set as default page / home page.

```
from django.contrib import admin
from django.urls import path, include
urlpatterns = [
    path('', include('cineverse.urls')),
]
```

```
from django.urls import path

from cineverse import views

urlpatterns = [
    path("", views.home, name='home'),
    path("info", views.info, name='info'),
    path("reviews", views.reviews, name='review'),
    path("about", views.timing, name='timing'),
    path("aboutus", views.about, name='about'),
    path("Vikram", views.mov1, name='mov1'),
    path("Sita Ramam", views.mov2, name='mov2'),
    path("Thor Love and Thunder", views.mov3, name='mov3'),
]
```

- Each URL will takes user to different pages.
- Ex:- /info to Movie Information page.
- /aboutus to aboutus.html and after 1 second redirects to About Us page.

- **Home page:**

- ✓ Home page is with basic information in brief.
 - ✓ Home page contains many buttons that leads to different pages.
- 1) Buttons on the footer redirects to respective pages .

- 2) Button “Watch the Trailer redirects to respective trailers of the movie.

- 3) By clicking on the name of each movie, it redirects to movie info. **# Vikram**

Note : Search bar in the home page redirects to home page itself, as it comes with template no changes are done.

- **[Movie name , Movie language , Movie length]** are variable and can be edited views.py .
- Many movies can added simply by adding a new data item views.py inside particular function , instead of mentioning in html page .
- Variable are passed dynamically to the page.
- For loop is used in html page to create as many as movie blocks in the home page.
- If conditions are also used to mention the status of availability of tickets for today and to represent the playing and upcoming movies.

- By clicking on from home page 'Cineverse' redirects to same home page.
- By clicking on home button on Home button redirects to same page again.
- **Movie Information page:**
 - ✓ Movie Information page gives user a brief overview about the movie, in a table format .
 - ✓ 1) Shows that are playing in all screens .
 - ✓ 2) Screen(s) in which movie playing .
 - ✓ 3) Trend in which seats are filling .
 - ✓ 4) Wikipedia link.
- Information of shows of movie in a particular screen is also show in another Table for user clarity.
- **Cineverse Information page:**
 - Cineverse Information page gives user a brief overview about the movie, in a table format.
 - ✓ 1) provides the Show Timings
 - ✓ 2) provides the costs of a particular seat class ,
 - ✓ Platinum
 - ✓ Gold
 - ✓ Silver
- Here data is passed through the variables, i.e. dynamic content .
- For timings of shows only 00 , 20 , 35 are passed instead of whole time to make the code simpler.
- User could easily get to know about show, screen details.

Reviews page:

- Reviews page is one of the sub theme of CineverSE concentrating on the movie details.
- It gives the standard IMDB rating information.
- Gives information about a movie particularly in a separate page , with links.
- Individual movie link contains links of IMDB and Wikipedia..
- More information could be added and designing could be done but it will out of the theme of Backend Django.
- These links redirects to respective pages

About Us page: (made with Nicepage desktop)

Conclusion:

- CineverSE finally is a good information app which has it's own use.
- The main theme is decided by the users , based on their interests found in this Web-application, that will be the future scope and target of this project.
- Designing part needs to be improved , as users are attracted to design , creativity .
- '**Booking**' option could be added in this site and this could take CineverSE to higher level , to compete with other websites.
- '**Booking**' page is the next future of this web-application CineverSE, sign in and signup features are needed to be added in this website , to make it better and useful.
- Finally CineverSE is an informative website and in future it will become a Booking web site too.
- I thank Skill vertex Team regarding my training in Basic python and Django.
- **Templates and Images:**
 - Travello colorib – Home page
 - About Us page – Nicepage
 - Images are collected from various other websites. (pixel bay, filmy focus, wallpapercave, wallpaperaccess etc..)
